

## InB-SP915-16 Spring Antenna

### Main technical specs:

|                                    |                                   |
|------------------------------------|-----------------------------------|
| Working Frequency(MHZ)             | 905~925                           |
| Gain(dBi)                          | 2.0                               |
| VSWR                               | ≤2.5                              |
| Spring Diameter(mm)                | 5.0                               |
| Spring Length(mm)                  | 13.0                              |
| Tail Length(mm)                    | 3.0                               |
| Elbow Length(mm)                   | 3.0                               |
| Input Impedance( $\Omega$ )        | 50                                |
| Polarization(W)                    | Vertical                          |
| Max-power(W)                       | 50                                |
| Working Temperature( $^{\circ}$ C) | -45 $^{\circ}$ C~+80 $^{\circ}$ C |
| Antenna Material                   | Copper                            |
